

PFOS/PFOA Challenges

- **Without a EPA cleanup standard we cannot capture our requirements**
 - Cleanup standard -- Lifetime Health Advisory (LHA) vs Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) risk assessment
- **Responding to state laws and standards**
- **PFAS exposure assessment and health study – Coordinating with ATSDR on the design and how we will work together throughout the process**
- **PFOS/PFOA versus Perfluoroalkyl Substances (PFAS) versus Perfluorinated Compounds (PFCs)**
- **EPA must go through the process to establish a Maximum Contaminant Level (MCL) under the Safe Drinking Water Act**
- **Disposal of contaminated groundwater and used granulated activated carbon (GAC)**
- **Insufficient time to program for requirements**

DoD remains committed to protecting human health and the environment
