

Proposed Topics for Chapter 62-302, F.A.C.

(continued)

- **May add text (narrative) that applies to all waters “nor shall turbidity levels be increased to levels that negatively affect designated uses or result in increased sedimentation or reduced light transmission to the point that the normal growth, function, reproduction, or recruitment of aquatic life is impaired,” and**
- **Also add language that would not allow turbidity to increase above background conditions within areas with corals or hard bottom communities**
 - **With “background conditions” taking into account the natural variability of turbidity levels**
