

SECTION 4: NUTRIENT MANAGEMENT

This section addresses the requirements for land application of all nutrients and organic by-products (e.g., animal manure, wastewater, commercial fertilizers, crop residues, legume credits, irrigation water, etc.). Consideration for manure odor management is included. Land application of manure and organic by-products is the most common method of manure utilization due to the nutrients and organic matter content of the material. Land application procedures is planned and implemented in a way that minimizes potential adverse impacts to the environment and public health.
