

Standard Sewage Spill Response

Notification
of spill event

FDEP leads sampling efforts
starting day after notification

- Usually FDEP staff and lab
- District staff and contract lab used as backup, provides hydrologic expertise when needed

FDOH uses sampling results to
determine if issuing a health
advisory is needed

Sampling continues if E. coli
results are above 410 cfu/ 100mL

Notifications and updates also
released on District
social media as they occur

When E. coli levels are below 410 cfu / 100mL:
sampling ends, health advisories are lifted
