MONITORING DATA ASSESSMENT

Monitoring data for the 2020 reporting year is included in Appendix A in both tabular and graphical formats. Raw analytical reports are included in Appendix B. The 2020 data serves as an initial baseline for all sampling points in Lowndes County.

Fecal Coliform

In general, fecal coliform sampling results indicated all sampling points exceeded water quality standards for the June and September sampling events. Lowndes County has not identified any point sources within the drainage areas that can be attributed to the widespread exceedances. Based on the limited data collected to date, it is the opinion of Lowndes County that the cause of the exceedances is from natural conditions.
