

The property is entirely within the Ichetucknee Springshed Priority Focus Area and 9.74 acres +/- are within the floodplain. Staff review found that the property has project potential to improve water quality and water flow within the Ichetucknee Springshed. District staff recommends partnering with FDOT on the land acquisition, with FDOT initially holding the title to the property with the possible future conveyance of a portion of the project land to Columbia County for their partnership area responsibility.

The triage summary map and conceptual project drawing are attached.
