<b>Total</b>	<b>11,375</b>	<b>5,088</b>	<b>16,463</b>									<b>453,912</b>	<b>46,520</b>		<b>296,233</b>	

Notes:

- (1) These columns include data that are used as input for clay modeling performed to develop clay disposal schedule. Shaded rows indicate settling areas that are currently part of the clay management system, including flow through ponds 4 SR and 8 SR where dredged clays are being deposited in relatively small areas with residual storage capacity.
- (2) For 10V SC, the "Max. Clay Fill Height" and "Volume Used" calculations disregard sand pile and lime storage areas, currently totaling approximately 771 acres (clay area = 181 acres).
- (3) For 9 SC, the "Max. Clay Fill Height" and "Volume Used" calculations disregard approximately 60 acres of the west wall area constructed with sand tailings (clay area = 675 acres).
- (4) For CSA 4 SC, reactivated in October 2019 after being under reclamation since July 2008, the "Volume Used" and "Clay Height" values shown in the last two columns are above the level of the old clays (avg. elev. = 144.0 ft), which are not expected to undergo any significant additional consolidation. The "Clay Height" in the last column is the "equivalent clay height" over the entire pond area that corresponds to the total volume of fresh and dredged clays deposited in the pond.
- (5) Settling area 8A SC is being exclusively used as a transfer pond for dredged clays since January 2020. "Volume Used" and "Clay Height" shown in last two columns assume pond is full.
- (6) Settling area 4 SR began receiving dredged clays transferred from 8A SC in February 2021. The clays have since migrated into settling area 8 SR just to the east. Both areas were previously used as "flow through" ponds since active clay deposition ended in the 1980s. The dredged clay area in both ponds is relatively small and, therefore, both settling areas are shown as being full in the last two columns.
- (7) For inactive (resting) settling areas 6B SR, 11 SR, 12 SR, and 13 SR, the "Volume Used" and "Clay Height" values shown in the last two columns are based on water depth sounding and pond level data obtained during the 2021 fieldwork.

Notes: Refer to Map VI-3A for location of settling areas.

>> indicates gravity clay flow to the next settling area.

(P) indicates pumping clay to the next settling area.

(\*) Flow paths not shown for CSAs 6A SC and 8A SC since these areas are not scheduled to receive new/fresh clay for the remaining of the mine's life (refer to Table VI-4). As discussed in the report, CSA 8A SC will continue to be used as a transfer pond for dredged clays until the last year of mining.

**TABLE VI-7  
CURRENT PERMITS AND PERMIT STATUS  
As of 12/31/18**

There were no violations of the permit conditions of the mining and beneficiation operations during 2018.

There were no reportable releases of any regulated substances from mining and beneficiation operations during 2018. There was one reportable release (phosphoric acid) from Swift Creek Chemical, with no off-site impacts.

14 SR	MINED	6.01	1,235	118.4	152	127.5	127.6	6	127.3	99
	UNMINED	0.84	299	132.5			135.2	4	135.1	99

Notes:

- (1) Clay quantities deposited beginning in 2022 (from Table VI-4) distributed in proportion to mined/unmined volume capacity for active CSAs 6A SC, 8B SC, and 9 SC, and new/future CSAs 7 SR, 24 SR, and 14 SR (i.e., only areas with mined/unmined analyses)
- (2) Elevations rounded off to nearest 0.1 foot.
- (3) After End of Deposition. Stabilized condition defined as the point in time at which any additional consolidation settlement is not expected to exceed 6 inches in 10 years
- (4) For 10V SC, analysis was based on small area currently available for clay disposal (181 acres). For 4 SC, analysis for new clay deposition over old/consolidated clays was based on total pond area. For 9 SC, unmined area excludes approx. 60 acres of west wall constructed with tailings.
- (5) For inactive (resting) settling areas, as well as CSA 4 SC, the post-reclamation analysis assumed that existing clays will not undergo any further consolidation. Entire area modeled without consideration of mined vs. unmined areas based on the estimated average elevation of the existing clay surface.
