

Figure 57. Comparison of IR contours for the movement of LNG ISOs and LPG in the Hialeah Yard.

The FN curve for the LPG Hialeah Yard movements is presented in Figure 58 and compared against the FN curve for LNG ISO train handling and ISO lifting. The SR profiles of moving an energy-equivalent amount of LNG and LPG are similar, even in this instance where Lift On/Lift Off is included for the LNG ISOs but not applicable for LPG.
