

Bradford County, Florida
Office of Emergency Management

TOPIC	DISCUSSION	FOLLOW-UP
	<p>Doc Bloodworth suggested we constantly work on CWPP and get a start on future updates.</p> <p>#7 Feasibility study of bypass/overpass.... SR16 bypass location has been changed to SR100 at the curve.</p> <p>#8 Encourage school district to install generators and hurricane shelters when building new schools... The county is currently looking for a location to build a new school and there are mitigation grants available for hardening new buildings to meet ARC4496 standards. Brian Johns commented that the new school building could be used as an alternative to Starke Elementary shelter to include general population, Special Needs and pets.</p> <p>Stacey Creighton noted that DOE has not yet recommended Bradford County for funding for a new school. Bradford is currently #4 on list for funding a new school project.</p> <p>#9 Install backup generator at Bus Barn... Brian Johns commented how imperative it is to get fuel for emergency response vehicles during a disaster event or large scale emergency. Even though the county has an emergency fuel contract in place with LV Hiers, so do many of the surrounding counties around Bradford which could delay response time. Having a backup generator at Bus Ban would help alleviate this issue locally.</p> <p>Brian Johns commented that by law, all gas stations on evacuation routes are required to have a backup generator but many in our county do not.</p>	<p>Next hard update is due 5 years from 2015 update (2020).</p> <p>Reach out to stations to encourage them to install backup generators. Reconsider acquiring generator from FFS.</p>
