

## Risk Management Activities

About 270 sources in Georgia are subject to the Federal Chemical Accident Prevention Provisions (Risk Management). Most sources are subject to Risk Management requirements due to large inventories of anhydrous ammonia or chlorine.

## Industrial Source Monitoring

Some sources are required to conduct stack tests either one-time or on a periodic basis. Tests are conducted by a company, or a testing firm, contracted by the company and the test reports are reviewed by the Industrial Source Monitoring Unit (ISMU). ISMU also conducts on-site audits of some stack tests.
