

Energy & Water

We Can Make More Energy. We Can't Make More Water.

The proposed Project Sail data center in Coweta County will have a consumptive use of 4 million gallons per day.

The project will require 910 megawatts.

Plant McDonough's consumptive use is 7.5 million gallons per day (2023 average).

The three-unit natural gas facility generates a total of 2,530 megawatts.

An 80-acre irrigated agricultural field has a consumptive use of an average of 26 million gallons of water per year, or approximately 71,000 gallons of water per day.

The water is only used during the growing season.
